About CaReMe-0

Cardiac disease, chronic kidney disease and metabolic derangements like type 2 diabetes (T2DM) and their risk factors share etiologies and pathophysiologic mechanisms.

These novel insights and their therapeutic implications have been recognized and adopted by cardiology, nephrology and endocrinology alike. Yet a need exists for a multidisciplinary scientific platform that unites all interested parties and serves as a unique gathering, devoting time to in-depth Cardiovascular, Renal, Metabolic and Obesity discussions.

The Conference is designed to provide a comprehensive overview of the latest advancements, challenges, and opportunities in primary care, with a special focus on the innovative CaReMe approach. It will discuss the best ways to incorporate the PCP in treating CaReMe-0 and next steps and tools for implementation.

CaReMe-0 2024 is principally aimed at Primary Care Physicians (PCPs): General Practitioners and Family Doctors

However, if you are an endocrinologist, nephrologist, or cardiologist, this conference offers a unique opportunity to engage in meaningful dialogue, influence better care processes, and form collaborations with field pioneers.

Highlights

- **Keynote Lectures:** Hear from leading experts who are shaping the future of CaReMe-0 primary care
- **Workshops and Seminars:** Participate in a variety of interactive sessions aimed at enhancing clinical skills and knowledge
- **Organization:** Help shape the optimal ways to organize and use novel ways and technologies to transform patient care in primary care settings
- **Panel Discussions:** Engage in thought-provoking conversations on topics ranging from healthcare policy to patient-centered care models
